Nod2 Monoclonal Antibody (Clone 2D9)
Item No. 10004942

Overview and Properties

Contents: This vial contains 500 μg of ammonium sulfate-purified antibody.
Synonyms: Caspase Recruitment Domain-containing Protein 15, Inflammatory Bowel Disease Protein 1, Nucleotide-binding Oligomerization Domain-containing Protein 2
Immunogen: Recombinant protein fragment from the internal region of human Nod2
Species Reactivity: (+) Human; other species not tested
Uniprot No.: Q9HC29
Form: Liquid
Storage: 4°C (as supplied); aliquots of the antibody should be stored at -20°C for long term storage (avoid freeze-thaw cycles)
Stability: ≥1 year
Storage Buffer: PBS, pH 7.4, with 0.02% sodium azide
Clone: 2D9
Host: Mouse
Isotype: IgG1κ
Application: Western blot (WB); the recommended starting concentration for WB is 1:500. Other applications were not tested, therefore optimal working concentration/dilution should be determined empirically. Western blotting: caution, may only be suitable for analysis of Nod2 transfected cells.

Lane 1: Sham transfected 293T lysate (10 µg)
Lane 2: Nod2 transfected 293T lysate (10 µg)

PRODUCT INFORMATION

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

SAFETY DATA
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY
Buyer agrees to purchase the material subject to Cayman’s Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

Description

Nod2 is a member of the apoptosis regulating protein family that has caspase recruitment-domains (CARDs) and also includes Apaf-1 and Nod1.1 Nod2 contains two N-terminal CARDs, a nucleotide binding domain (NBD), and multiple C-terminal leucine-rich repeats (LRRs). Nod2 is expressed in monocytes whereas Nod1 (CARD4) is expressed in multiple tissues.1-4 Both Nod1 and Nod2 act as intracellular receptors for bacterial lipopolysaccharides, activate NF-κB, and contribute to inflammatory bowel disease.3,5-7 A frameshift mutation in the NOD2 gene is associated with susceptibility to Crohn’s disease, possibly by causing truncation of the tenth LRR.8,9 Cayman Chemical’s NOD2 Monoclonal Antibody can be used for Western blot and immunohistochemical analysis of Nod2 on samples of human origin. The antibody will also recognize three Nod2 polymorphisms: L1007finsC, G908R, and R702W.2
