PRODUCT INFORMATION

PCSK9 (human) Blocking Peptide

Item No. 10007186

Overview and Properties

Contents: This vial contains 200 µg lyophilized peptide. Synonyms: NARC-1, Proprotein Convertase Subtilisin Kexin 9

Storage: -20°C (as supplied)

Stability: ≥3 years

Procedures

This vial contains 200 µg lyophilized peptide. The PCSK9 (human) blocking peptide (human PCSK9 amino acids 490-502) can be used in conjunction with Cayman's PCSK9 (human) Polyclonal Antibody (Item No. 10007185) to block protein-antibody complex formation during immunochemical analysis of PCSK9. Dissolve the peptide in 200 µl of purified water.

To block antibody/protein complex formation, the following procedure is recommended:

- 1. Mix the PCSK9 (human) Polyclonal Antibody (Item No. 10007185) and blocking peptide together in a 1:1 (v/v) ratio in a microfuge tube. For example, mix 20 μ l of antibody and 20 μ l of peptide.*
- 2. Incubate for 1 hour at room temperature with occasional mixing prior to further dilution and application of the mixture to the immunoblot.
- 3. Dilute the mixture to the final working antibody concentration and apply to the slide or membrane

*This is a recommended mixture. The minimum amount of peptide needed for complete blocking has not been precisely determined and may vary depending on the sample being analyzed. The amount of peptide required may need to be increased if sufficient blocking does not occur.

WARNING
THIS PRODUCT IS FOR RESEARCH ONLY - NOT FOR HUMAN OR VETERINARY DIAGNOSTIC OR THERAPEUTIC USE.

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

Buyer agrees to purchase the material subject to Cayman's Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
