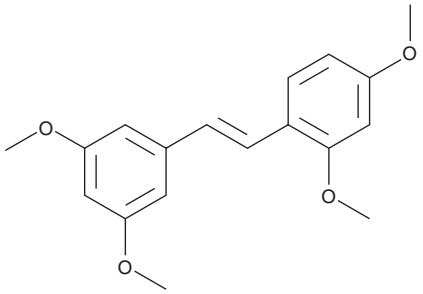
PRODUCT INFORMATION

TMS

Item No. 10038

CAS Registry No.:	24144-92-1
Formal Name:	1-[(1E)-2-(3,5-dimethoxyphenyl) ethenyl]-2,4-dimethoxy-benzene
Synonym:	2,3',4,5'-Tetramethoxystilbene
MF:	$C_{18}H_{20}O_4$
FW:	300.4
Purity:	≥98%
UV/Vis.:	λ_{max}: 219, 302, 326 nm
Supplied as:	A crystalline solid
Storage:	-20°C
Stability:	≥2 years



Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

TMS is supplied as a crystalline solid. A stock solution may be made by dissolving the TMS in the solvent of choice, which should be purged with an inert gas. TMS is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of TMS in these solvents is approximately 0.4, 20, and 30 mg/ml, respectively.

TMS is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, TMS should first be dissolved in DMF and then diluted with the aqueous buffer of choice. TMS has a solubility of approximately 0.5 mg/ml in a 1:1 solution of DMF:PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Description

CYP1B1 is mainly an extrahepatic enzyme which oxidatively metabolizes both endogenous (steroids; eicosanoids) and exogenous xenobiotics such aspolyaromatic hydrocarbons. TMS is a potent and selective inhibitor of CYP1B1, with an IC_{50} of 6 nM.[1] It is 50-fold selective for the inhibition of CYP1B1 *versus* CYP1A1, making it a useful tool to differentiate between various CYP450 families.[1] In cultured human colon cancer cells, TMS induces apoptosis and inhibits cell growth with an IC_{50} of 0.8 µg/ml.[2]
