Cholesterol Sulfate (sodium salt)
Item No. 15106

CAS Registry No.: 2864-50-8
Formal Name: (3β)-3-(hydrogen sulfate)-cholest-5-en-3-ol, monosodium salt
Synonyms: SCS, Sodium Cholesteryl Sulfate
MF: C_{27}H_{45}O_{4}S • Na
FW: 488.7
Purity: ≥95%
Supplied as: A crystalline solid
Storage: -20°C
Stability: ≥4 years

Information represents the product specifications. Batch specific analytical results are provided on each certificate of analysis.

Laboratory Procedures

Cholesterol sulfate (sodium salt) is supplied as a crystalline solid. A stock solution may be made by dissolving the cholesterol sulfate (sodium salt) in the solvent of choice, which should be purged with an inert gas. Cholesterol sulfate (sodium salt) is soluble in organic solvents such as DMSO and dimethyl formamide. The solubility of cholesterol sulfate (sodium salt) in these solvents is approximately 10 and 20 mg/ml, respectively.

Description

Cholesterol sulfate is an endogenous component of cell membranes where it serves as a substrate for steroid synthesis, influences lipid metabolism, stabilizes cell membranes, regulates the activity of functional proteins, and plays a role in keratinocyte differentiation and development of the epidermal barrier. This synthetic formulation can be used to form nonconventional liposomes in order to study cellular membrane properties.
