WARNING
This product is for research only - not for human or veterinary diagnostic or therapeutic use.

SAFETY DATA
This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY
Buyer agrees to purchase the material subject to Cayman’s Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.

4-hydroxy-3-Methoxyphenylglycol (piperazine salt) is supplied as a crystalline solid. A stock solution may be made by dissolving the 4-hydroxy-3-methoxyphenylglycol (piperazine salt) in the solvent of choice, which should be purged with an inert gas. 4-hydroxy-3-Methoxyphenylglycol (piperazine salt) is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of 4-hydroxy-3-methoxyphenylglycol (piperazine salt) in these solvents is approximately 10, 15, and 25 mg/ml, respectively.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of 4-hydroxy-3-methoxyphenylglycol (piperazine salt) can be prepared by directly dissolving the crystalline solid in aqueous buffers. The solubility of 4-hydroxy-3-methoxyphenylglycol (piperazine salt) in PBS, pH 7.2, is approximately 1 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Description
4-hydroxy-3-Methoxyphenylglycol (piperazine salt) is a metabolite of norepinephrine derived in part by deamination of normetanephrine or by O-methylation of dihydroxyphenylglycol after cellular uptake of either intermediate. It is released into the blood and cerebrospinal fluid and has been used as a biochemical index of recent sympathetic nervous system activity.
