| Breathing equipment: | |
| In case of brief exposure or low pollution use respiratory filter device. In case of intensive or longer exposure use respiratory protective device that is independent of circulating air. | |

| Protection of hands: | |
| The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Due to missing tests no recommendation to the glove material can be given for the product/ the preparation/ the chemical mixture. | |
| Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation | |

| Material of gloves | |
| The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application. | |

| Penetration time of glove material | |
| The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed. | |
