un c	Protective gloves
Due prepa Sele degra Mate The quali subs be ch	glove material has to be impermeable and resistant to the product/ the substance/ the preparation. to missing tests no recommendation to the glove material can be given for the product/ the aration/ the chemical mixture. ction of the glove material on consideration of the penetration times, rates of diffusion and the adation rial of gloves selection of the suitable gloves does not only depend on the material, but also on further marks of ty and varies from manufacturer to manufacturer. As the product is a preparation of several tances, the resistance of the glove material can not be calculated in advance and has therefore to becked prior to the application.

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
